

HAMCRAM ANNOUNCEMENT

On Saturday February 24th 2018 the U. S. Coast Guard Auxiliary Flotilla 16-01 along with NJECT.us will be hosting a “HAMCRAM” at 8AM to be held at Bayville First Aid Squad.

What is a “HAMCRAM?”

It's a class where you will be instructed on the particulars to pass the Technician Class Amateur Radio License test. We will go over the entire question and answer pool (Element 2). From that pool, you will be given 35 questions on the test. Morse Code is no longer required or part of the test.

The test will be given immediately after the course. Cost: \$15

If you are involved with radio communications at any level, we strongly recommend this class, as it will help you understand many facets of radio and open a whole new world of radio communications. This entry level license will allow you to work portions of many bands available to amateur radio operators. The real learning begins AFTER you obtain your license and get on the air!

Where Auxiliary members are enthusiasts of boating and on the water activities, you will find amateur radio operators are the same when it comes to radio. Since Auxiliary members quite frequently utilize marine radio, you will have a better understanding of its use and how amateurs use their radio bands in disaster relief, message forwarding, and sharing technical information.

IMPORTANT CLASS PARTICULARS:

Date: Saturday February 24, 2018

Class Start time 0800 hours Sharp (08:00 am)
(*come early!* Doors will open by 0730)
